Before applying **Epsom Salts**, however, it's a good idea to have your soil tested to determine whether it's deficient of magnesium.

You should also be aware that many plants, like beans and leafy vegetables, will happily grow and produce in soils with low levels of magnesium.

Plants like rose, tomatoes and peppers, on the other hand, require lots of magnesium, and therefore, are more commonly watered with **Epsom Salts**.

When diluted with water, **Epsom Salts** is easily taken up by plants, especially when applied as a foliar spray.
