

EMISTARX FUNGICIDE

Emistarx Fungicide (Active Ingredient: Azoxystrobin) is a broad spectrum fungicide of the class of synthetic compounds called β -methoxyacrylates, and also inhibits spore germination.

Emistarx Fungicide acts as a systemic fungicide of the strobilurin group, widely used for the control of *Plasmopara Viticola* and *Uncinula* in grapes, grey mold in a variety of crops, including vegetables, ornamentals and fruits tree.

Emistarx Fungicide has the broadest spectrum of any antifungal treatment which is very effective against all 4 major groups of fungi – the Ascomycota, Deuteromycota, Basidiomycota and Oomycota.

FEATURES & BENEFITS

- Broad spectrum control of diseases, a single solution for major diseases.
- Multifunctional action-can be used as protective, curative & eradivative.
- It's translaminal & systemic movement inhibits new growth of fungus after spray.
- It is quickly absorbed by plants & rapidly enters in plant system & starts working.
- It's gives longer duration control thus reduces the number of sprays.
- It's a perfect fit for disease resistance management.
- It's help the plant to fight better against the abiotic stress and better utilisation of the nutrients provided.

Control / Treat Type of Diseases		
Anthracoese	Late blight: Phytophthora infestans Sclerotinia	Early blight: Target spot
Brown spot		
Botrytis bunch rot	Sclerotinia minor	Leaf spots: Colletotrichum spp
Powdery mildew	Alternaria	
Gummy stem blight	Black rot	Soil borne: Black scurf Silver scurf
Stem end rot: Anthracoese	Downy mildew	
		Myrtle rust
Mode of action: It kills fungal cells through inhibition of cell membrane biosynthesis and cellular respiration.		

APPLICATION FREQUENCY Apply once a week.

DIRECTION FOR USE Shake well before use.
