

STARX DOLOMITE PLUS

The soil conditioner effectively correct magnesium deficiencies & neutralise soil acidity for lawns and higher cut turf

CONTENT

- Calcium Oxide(CaO).....21%
- Magnesium Oxide(MgO).....12%

STARX Dolomite Plus is an economical way to increase the soil pH in acidic soils and to raise magnesium levels in deficient soils.

STARX Dolomite Plus adds calcium and helps to improve soil structure and increases the availability of some trace elements.

STARX Dolomite Plus is used for correcting soil calcium and magnesium deficiencies by adding Ca and Mg as soil nutrients.

STARX Dolomite Plus apply at higher rates to increase the soil pH where soils are acidic.

STARX Dolomite Plus is highly dispersible powder in water, therefore it breaks down easily through irrigation.

CaO Calcium Oxide - 21%	MgO Magnesium Oxide - 12%	 Soil Conditioner	 Increase or Stabilise pH
-----------------------------------	-------------------------------------	----------------------	------------------------------

DIRECTIONS FOR USE

Type of Crop	Application Rate	Instruction
Leafy vegetables	30g – 50g per m ²	Apply STARX Dolomite Plus only when soil pH below 5.
Fruit tree	60g – 80g	
Middle aged tree	300g – 600g	
Older tree	1 – 2 kgs	
Turf & Lawn	50g – 100g per m ²	
Application rate is dependent on the amount of calcium required, soil type & environment. An accurate treatment rate can be determined from the results of a soil analysis.
