

DIATOMACEOUS EARTH

NATURAL PESTICIDE

Ants

Beetles

Flies

Mealybugs

Ticks

Food Grade DE

STARX[®]
FOR BOTANIC GARDENING

Diatomaceous Earth (DE) (Active Ingredient: Diatomaceous Earth (Amorphous Silicon Dioxide) is a natural mineral-based mechanical pesticide commonly used in gardens. The microscopic particles damage the protective outer layer of insects, causing them to dehydrate and die.

BENEFITS

- Safe for use on most plants.
- Does not contain chemicals, harmless to humans and animals.
- Kills pests with exoskeletons by dehydration.
- Deters slugs and snails.
- Does not harm earthworms.
- Does not harm flying pollinators if used appropriately.
- Non-chemical pesticide prevents pests from developing pesticide resistance.

Ready-To-Spray Formula

No mixing required. Simply shake and spray.

Natural Mineral-Based Pest Control

Formulated with diatomaceous earth, a naturally occurring mineral.

Kills Pests by Dehydration

Works by damaging the protective outer layer of insects.

Effective Against Common Garden & Household Pests

Helps control ants, aphids, thrips, mites, mealybugs and more.

Even Coverage on Plants

Liquid spray allows better contact with pests on leaves and stems.

Instructions

Spray directly onto pests and affected areas. Repeat every 5–7 days or as needed until pests are controlled.

Ready-To-Spray Method Guide

DE works best when dry, but it can be applied as a spray for easier coverage. After spraying, the water evaporates and leaves a thin layer of DE powder on the surface to work against pests.
