USAGE DIRECTIONS

Use as a foliar spray or irrigation application every 14-21 days.

Use 5g of **STARX Kelp Soluble Powder** per 10 ltrs of water for young plants (7-14 days plant).

Use 8g to 12g of **STARX Kelp Soluble Powder** per 10 ltrs water for ornamental trees, shrubs, fruits, vegetables or lawns.

Ornamental Trees and Shrubs: 8g to 12g per 10 ltrs of water

- 1st: at bud formation
- 2nd: 2 weeks later
- 3rd: 14-21 days later

Ingredients

- Kelp (Ascophyllum nodosum)

Nitrogen (N)	0%
Phosphorus (P)	0%
Potassium (K)	17% in the form of K ₂ O

House Plants: 5g per 10 ltrs of water

- 1st: at emergence of transplant
- 2nd: every 2 weeks
- 3rd: once per month at dormancy

Lawns: 16g to 25g per 20 ltrs of water

Start foliar application at initial growth stage and continue at 3-4 week intervals.

Make additional applications after periods of stress or heavy use, or to newly applied sod, and as late season spray to help improve resistance to kill and frost damage.

Fruits and Vegetables: Beginning at pre-bloom

8g per 10 ltrs of water. Repeat every 3-4 weeks throughout growing season. With blueberries, add one additional treatment 2-3 weeks after harvest.

BENEFITS

- Healthier plants with all-natural fertilization and faster assimilation.
- Ideal for soaking seeds or bulbs before planting to improve germination, health, and early vigor.
- Strengthens cuttings, transplants, and bare-rooted trees and shrubs when used as a root dip.
- Suitable for foliar feeding of indoor and outdoor plants.
- Enhances greening of athletic turf, lawns, and livestock pastures with spring applications.
