

# ORGANIC EARTHWORM CASTINGS

**ORGANIC EARTHWORM CASTINGS** are a natural form of fertilizer produced by earthworms. Also known as vermicast or worm manure, worm castings are essentially earthworm waste. As these creatures digest compost, their waste becomes an optimal soil enhancer.

**ORGANIC EARTHWORM CASTINGS** are excellent for plants because they contain all the essential nutrients that plants need. Additionally, they enrich the soil in which the plants are grown. This fertilizer can be used on nearly any type of plant without burning them. Worm castings can be applied as top dressing, side dressing, or worked into the soil.

**ORGANIC EARTHWORM CASTINGS** have a broad and diverse biological load that generates the highest measurable nitrogen (N) cycling potential among soil amendments. Quality control methodologies are utilized to ensure consistency from batch to batch, offering you the best natural fertilizer possible.

**ORGANIC EARTHWORM CASTINGS** offer a wide variety of benefits to your soil and plants, including active biology that works synergistically with your plants and soil, aiding in numerous ways.

**ORGANIC EARTHWORM CASTINGS** are loaded with microbes, bacteria, fungi, amoeba, protozoa, and nematodes. This natural life works in a symbiotic relationship with your plants to help break down nutrients, increase water retention, improve soil aeration, and can help prevent disease.

**ORGANIC EARTHWORM CASTINGS** humus also has the amazing ability to absorb toxins and harmful bacteria, thereby helping to improve overall plant health.

**ORGANIC EARTHWORM CASTINGS** also consists of a full spectrum of minerals and nutrients such as potassium, nitrogen, magnesium, calcium, phosphorus, copper, zinc, cobalt, iron, and carbon.

**ORGANIC EARTHWORM CASTINGS** offer a natural slow release of nutrients that sustain and feed your plants throughout the growing season. In contrast, chemical fertilizers often provide a burst of growth initially but offer little sustained benefit afterward.

100% Organic

Odourless

Earthworm  
Compost

- Enhance and amend soil conditions in an organic and natural way for vigorous plant grows.
- All essential nutrients and trace-elements are in the most simple forms, hence plants can quickly and easily absorb it.
- Improve soil structure to optimum conditions for maximum aeration and water retention.
- Promote fibrous root system.
- Balance up soil's pH reading.
- Improve soil's Electrical Conductivity (EC).
- Improve the quality of the plant's yield.
- Improve plant's immunity system to against diseases.

Crop	Recommended Rate
Herb	3 - 5 spoon per month
Potted Plant	4 - 6 spoon per month
Vegetable	300 - 500 g / m <sup>2</sup>
Fruit Tree	3 - 4 kgs / tree
Mature Tree	5 - 6 kgs / tree
